

Prime-Line, Inc.

Doors, Mouldings, & Millwork

PRODUCT FINISHING INSTRUCTIONS

All Prime Lite® products are pre-primed exclusively with an oil base commercial grade Valspar primer. Our special oil base primer allows Prime Lite products to be finished by any oil or water based paint.

Prime Lite's oil base primer, when primed on both sides, provides far more job site protection against mold abuse than all the other latex primers currently on the market. Another benefit of priming both sides of Prime Lite mouldings is that it slows down the emission of any formaldehyde and offers superior moisture resistance. This yields the finest finishing surface possible.

Prior to painting, make sure the surface is clean. Remove any grease, oil, or other foreign materials. Dust, dirt, fingerprints, or any minor imperfections may be removed with a scotch brite pad or can be wiped down with a naphtha cleaner.

Staining or painting Prime-Line mouldings before installation is best. However, if you install the moulding and then finish it, protect the area around the mouldings by masking it off with painter's tape. To prevent the tape from drying to the finish, carefully remove it after the application of the paint. It is important that higher quality paints with high solid contents are used. We recommend two finish semi-gloss coats for highest level of quality, durability, and appearance.
